

Join Our Quest: Hong Kong Space Hub 2030?

Co-creating a new vibrant Hong Kong, leveraging on our youths, our universities, our global mentors, our Smart City, and NewSpace Economy

I. Aim of the Orion Astropreneur and Space Academy (OASA)

1. To develop young global systems leaders who can work with science, with others who can see the world differently, and learn the facility to create new businesses.
2. To connect the unconnected to the Cislunar economic and industrial highway.
3. To promote the Overview Perspective – One Earth, One Planet, and One Humanity.

II. Seeking Global Mentors and Partners to Co-Sensing, Co-Innovate, and Co-Create

III. Space Missions

- By 2021, establish “Space Xccelerator” laboratory at universities, connecting SMEs, students, research institutes, and Global mentors, to work on new Big Data enabled, ESG business challenges.
- By 2022, get young people “Space Ready” and prepare them for Space Tourism, Space Hotels, and bases on the Moon and on Mars.
- By 2025, appoint “Space Ambassadors” and begin advocating the preparation of “Space Pioneers” for Space Stations, Space Portals, and Space Missions.

These missions, and even if just one comes to fruition, should help connect and grow this new ecosystem so that Hong Kong can become a true Space Portal, among many, by 2030. Our global headquarters is in Hong Kong and plans are in place to establish student chapters at universities. Join us and re-ignite the Hong Kong can-do spirit, starting in the Greater Bay. Please visit us and see how you and your company can create real impact.
